Internal tasks often get neglected, but today we are pleased to announce that

we have comprehensively revised our environmental policy! :)

It is now based on our proven agile principles and fits seamlessly into our mission statement and our existing guidelines on human and animal rights, information security and anti-corruption. For us, environmental protection is not an optional extra, but is firmly anchored in our DNA.

'For **Spreenauten**, sustainability is not just a mandatory exercise, but an integral part of our technological work,' explains Oliver Hertkorn, Environmental Officer and Managing Director of Spreenauten GmbH. "Our passion for robust hardware and software development goes hand in hand with our responsibility for our planet. Our agile environmental policy enables us to respond even more quickly to new challenges and to continuously and transparently pursue our goals of resource efficiency and carbon neutrality."

We firmly believe that protecting all living beings and preserving our environment are our highest principles. Whether we are developing innovative wireless solutions or installing highly complex infrastructures worldwide, we always think about maximum product life and minimum environmental impact.

This includes approaches such as 'refurbishment first', modular development for reparability and upgradeability, and our 'green coding' in software development.

This holistic way of thinking fits seamlessly into our corporate philosophy. We protect environmentally relevant data with the same care as sensitive information and attach great importance to the ethical selection of our partners, from suppliers to waste disposal companies. With our technical expertise and passion for innovation, we are working to make the future not only more functional, but also more sustainable.

We invite you to learn more about this approach. With our new agile environmental policy, we are underlining our commitment to not only being a leader in critical communications, but also to playing a pioneering role on the path to 'next level sustainability.' For us, progress and responsibility are inextricably linked.

This development is particularly relevant for our friends and business partners. It not only ensures that you are working with an ethically responsible company that pursues the highest standards in environmental and social issues, but also minimises risks and supports you in achieving your own sustainability goals. This holistic approach also underlines our role as a **Motorola Platinum Partner**. The strict criteria of this certification, which stand for technical excellence and outstanding customer service, are perfectly complemented by our commitment to environmental protection. It is our claim to set standards not only in **radio technology**, but also in responsibility, thus offering you a partner you can rely on completely – today and in the future.

The principles and guidelines (high level) can be found on our website at:

<https://www.spreenauten.de/spreenauten-gmbh/umweltschutz-richtlinie-der-spreenauten-gmbh/>.

We will be happy to provide you with the new environmental protection guidelines in detail on request.
